SOHO Network Project

SOHO stands for Small Office/Home Office network. It is used to connect a small number of devices like computers, printers, and routers.

Objective:

To design and configure a simple and secure network for a small office or home.

Requirements:

• Router • Switch • PCs/Laptops • Ethernet cables • Internet connection

Network Design:

Router connects to ISP, switch connects to router, and all devices connect to switch.

IP Addressing Example:

Network: 192.168.1.0/24 Gateway: 192.168.1.1 Devices: 192.168.1.2 - 192.168.1.50

Configuration Steps:

1. Configure router IP 2. Enable DHCP 3. Connect switch 4. Assign IPs to devices 5. Test connectivity using ping

Security:

• Enable password on router • Use WPA2 for WiFi • Disable unused ports

Conclusion:

SOHO networks are simple, cost-effective, and useful for small environments.
